
NEXCOPY CONFLICT MINERALS INFORMATION

Nexcopy Inc. is aware of and concerned by reports that profits from the sale of certain metals mined in the Democratic Republic of the Congo (DRC) or adjoining countries have helped fuel war and human rights violations in the eastern Congo. Section 1502 of the Dodd-Frank Wall Street Reform and Consumer Protection Act imposes new supply chain reporting requirements on U.S. publicly traded companies to promote transparency and consumer awareness regarding the use of "conflict minerals" (tantalum, tin, gold and tungsten, or "3TG") that directly or indirectly finance or benefit armed groups in that region.

As required by the Dodd-Frank Act, the U.S. Securities and Exchange Commission (SEC) has adopted rules requiring publicly traded companies to disclose certain information about the use of 3TG that originated in the DRC or an adjoining country in their products. Companies are also required to perform a reasonable country of origin inquiry and, if necessary, additional due diligence to confirm that the use of 3TG is conflict free. Conflict free means the product does not contain 3TG that directly or indirectly finances or benefits armed groups in the DRC or an adjoining country.

Nexcopy Inc., is a privately held company and does not fall under the Dodd-Frank Act. However, we are equally concerned with the sourcing of conflict minerals and ask all contract manufacturers to supply, to the best of their ability, a statement regarding their mineral sourcing.

Nexcopy Inc., like many companies in electronic product industries, uses some of these materials in the manufacturing of our products as they are required for the functional performance of the products. Nexcopy does not purchase these metals directly from smelters or mines, so we must rely on the source information provided by our suppliers. Nexcopy is working with our direct suppliers to trace newly mined minerals back to their origin in order to ensure responsible sourcing.

The information contained within this document is based on information provided to Nexcopy Inc., by its contract manufacturers. An audit has not been performed regarding the accuracy of the information and was provided as "best known data" for the current market conditions for manufacturing of said conflict minerals.

Tungsten is used by our contract manufacturers in the solder process of electrical components mounted to printed circuit boards. Tungsten is required for this manufacturing process and our contract manufacturers are not aware of minerals being supplied to them in an illegal manor.
